INDUSTRIES
The science of Skin

The elevated skin treatments
and body shaping technology

A large, abstract, golden-brown textured background on the left side of the page, resembling a microscopic view of skin or a complex network of fibers. It occupies the left half of the page, with a diagonal white line separating it from the text area.

WHO WE ARE

A leader in skin treatments and body shaping.

i-Tech Industries distinguishes itself for developing cutting-edge technologies and effective solutions for improving quality of life and meeting the individuals' needs in terms of health, wellness and beauty.

Throughout its history, the company's expert engineers studied and divulged their discoveries on the skin and its treatments, creating the scientific base of the icoone® technology.

icoone® employs the patented technology Roboderm®, capable of releasing up to 21.600 microstimulations every minute on the skin and the microvacuoles located in the subcutaneous tissue.

This specific action, coupled with the LASER and LED technology, allows the icoone® treatments to reach the deeper layers of the tissue efficiently yet gently, and to deliver exceptional results.

THE CONCEPT

Roboderm® represents a new concept of technology for the skin treatment.

This patented technology works differently from any other technology and device present in the market today, thanks to the MICROSTIMULATORS.

The microstimulators rotate forward, backward, inward and outward to release multiple skin stimulation, according to the desired goals.

The micro holes matrixes designed on the surface of the microstimulators (Roboderm®) work and stimulate

perfectly the microvacuoles located in the subcutaneous tissue. The connective tissue fibres that delimit microvacuoles transmit this stimulation to deeper tissues,

This specific action is called Multi Micro Alveolar Stimulation (M.M.A.S.) and allows to deliver a more efficient action, in a gentler way for the client that receives the treatment and for the operator that apply it.

LASER & LED Technology

LASER and LED, associated with the microstimulations, allow to achieve focused treatments in specific fat areas resistant to both diet and exercises, obtaining faster and long-lasting results.

LASER Body Shaping

The 915 nm wavelength can reach the deeper layers of the tissue and it acts on the cell, penetrating into it and enhancing lipolysis.

LED Skin Rejuvenation

The 650 nm wavelength penetrates in the fibroblasts that are in the connective tissue with consequent production of collagen. This wavelength is able to reach fat cells. When it hits fat cells, it determines the opening of transitory pores on the cell membrane allowing the fat release.

Robotwins

icoone® is the only device able to achieve treatments with two handpieces at the same time, generating a symmetric stimulation, twice as fast and effective as a single operated handpiece: relaxing and delicate as a manual massage but with the technology effectiveness.

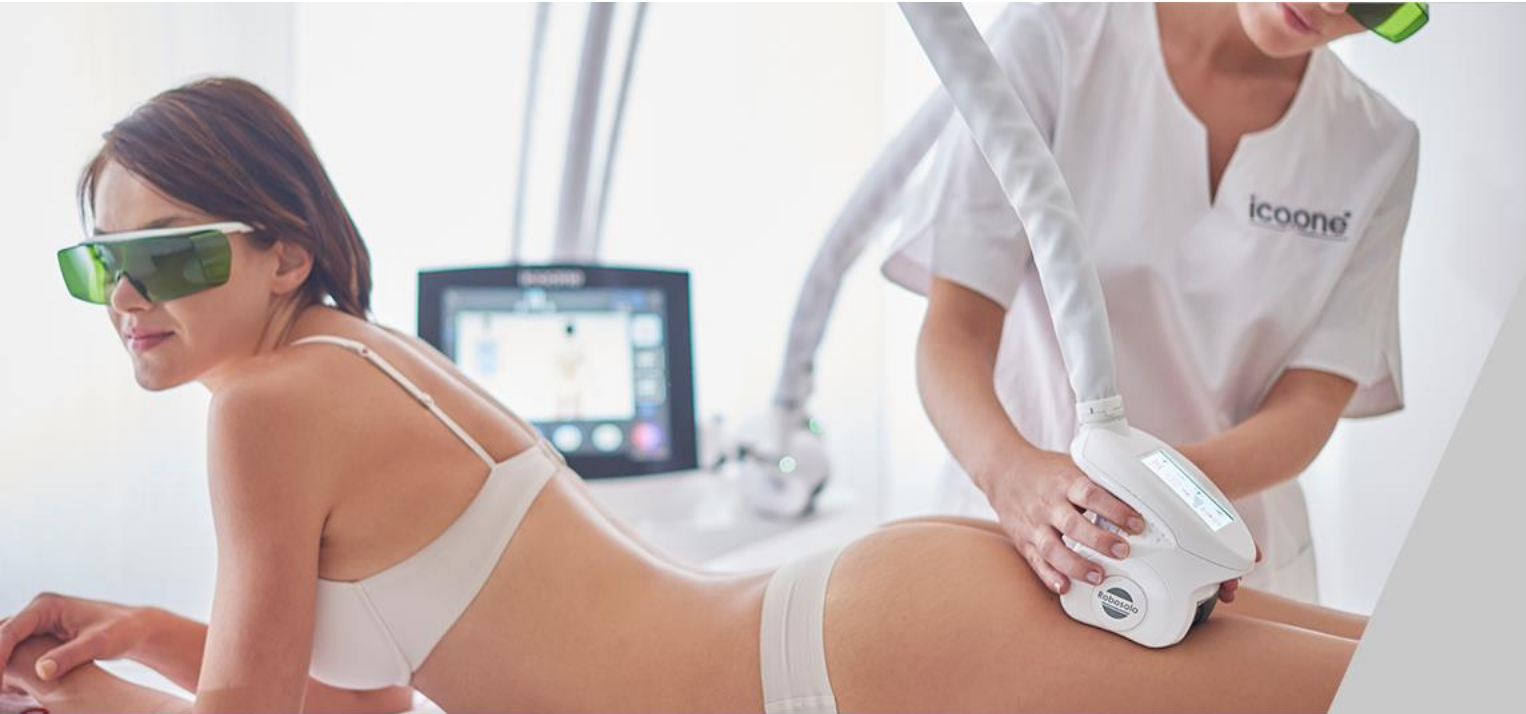

Robomini twins

These handpieces, now available also in twin function, are specifically designed to treat efficiently the smallest, hard to reach and most sensitive areas of the body, such as the inner thighs and arms, knees and ankles.

Body treatments

Body treatments

Robosolo

This handpiece embodies both LED and LASER sources that can be used together or separately. Thanks to its ergonomics and ease of use, it allows targeted treatments in specific fat areas on large parts of the body.

Robomicro

A set of 6 micro-handpieces specifically designed to reach with precision the smallest and more sensitive areas of the body and specially of the face, in order to offer more personalized treatments, thanks to dedicated focus programs.

Anti-aging

icoone treatments enhance the quality and appearance of the skin, promoting tissue oxygenation and skin regeneration. They smooth wrinkles achieving a visibly younger look.

Lifting

Thanks to specific programs, icoone treatments manage to oxygenate and revitalize your skin, reduce the double chin, decongest puffy eyes, plump lips, tone cleavage, firm neck and lift breast. For a rejuvenated and glowing aspect.

Face & Décolleté treatments

icoone® redefines your silhouette and improve the appearance of your skin in just a few sessions with incomparable results. The treatment favours metabolic exchanges and improves the cellular activity, giving a general sensation of wellbeing.

How Anna Zahn Of Ricari Studios Is Revolutionizing The Self-Care Industry

Our treatments are primarily centered around the Italian made **ICOONE device**. Rollers deliver inward, outward, forward and backward rotations providing fractionated skin stimulation customized to our clients needs. It gently yet intensively conditions skin tissue to reduce cellular deposits, enhance blood and lymphatic flow and reactivate lipolysis. Rhythmic vibrations also stimulate collagen and elastin production to rapidly smooth and firm the skin. Unlike other techniques, the treatment is painless, incredibly customizable, and deeply effective. The fundamentals of the techniques we use have been around for centuries, but in some ways have managed to get lost or forgotten in the evolution of wellness. The technology we have today is empowering a sort of renaissance of this ancient knowledge, augmenting its potential and refinement of its application through technological innovation.

Puff Piece: Test Driving the Newest Solutions for Keeping Skin Fit and Firm

BY ALISSA BENNETT
January 13, 2020

As I step into what can best be described as a sheer skin suit, Zahn walks me through the **ICOONE**, a futuristic depuffing device with a pair of oscillating roller heads that glide over the face and body to gently reduce cellular deposits, relax the nervous system, and enhance blood and lymphatic flow. "There is no main organ in the lymphatic system to keep things moving along, like the heart does for the circulatory system," she explains as the hour-plus-long, totally painless sci-fi massage gets under way. So Zahn and her machine assume that responsibility and optimize it. My abdomen is miraculously flat, my cheekbones newly chiseled, when I peel myself off her jasmine-scented table. I'm hooked on the \$275 treatment and book another six weeks later.

Gifts for the "Extreme Self-Care" Person In Your Life

From a deeply relaxing facial that's not for your face to a total body overhaul on the coast of Spain, these 14 gifts that are all about (extreme!) wellbeing. Whether you self-gift these self care-themed gifts is up to you

By Fiorella Valdesolo
Dec. 16, 2019 11:06 am ET

PHOTO: COURTESY OF RICARI STUDIOS

A body-contouring series.

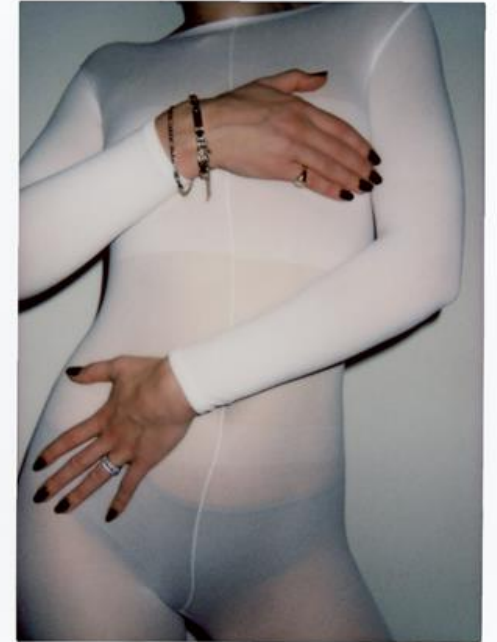

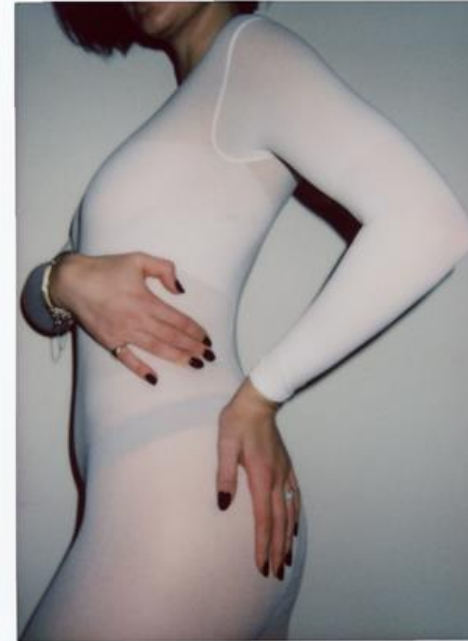

Body whisperer Anna Zahn's cellular stimulation treatments (from \$255; ricaristudios.com) using a futuristic **icoone medical** device sourced from Italy have developed a cult following on both coasts (she opened a pop-up location in a Soho showroom in New York this fall) for their dramatic, body-smoothing and slimming effects. A post-travel and pre-event beauty boon.
